

Get help with your alternative fuel transportation project!

The California Energy Commission can supply assistance for both public and private vehicle fleets that use alternative fuels — Compressed Natural Gas (CNG), Liquefied Natural Gas (LNG), Ethanol, Hydrogen, Propane, and Biodiesel.

Whether you need advice on your business plan for potential alternative fueling sites, or help evaluating your construction and engineering needs, Energy Commission staff can help you:

- Locate the optimum site
- Prepare cash flow analyses
- Develop marketing plans and investment proposals
- Identify funding sources
- Overcome permitting complications
- Solve construction difficulties
- Monitor and analyze the system once it is in place to insure it is operating properly
- Clarify requirements for on-going maintenance

The Energy Commission can help project owners assess their system's reliability and offers on-going education on alternative fuels. After the initial consultation, owners will receive a written report with recommendations.

For more information, please contact Mike Trujillo in the Commission's Emerging Fuels and Technology Office at 916-654-4566, or e-mail: MTrujill@energy.state.ca.us
